single-cell reconstruction

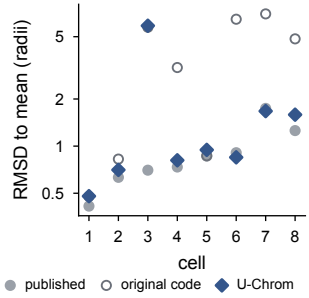

a **U-Chrom reconstruction**
Stevens 2017 Cell 1, 100 kb

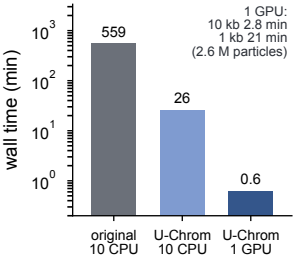

b **Agreement with published**
Cell 1, pairwise distances

c **Ensemble precision**
8 cells × 10 models

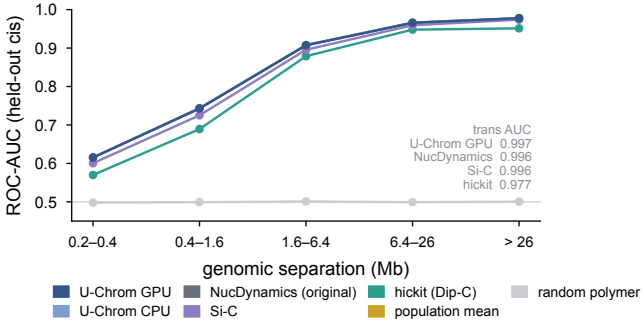

d **NucDynamics speed**
Cell 1, 10 models

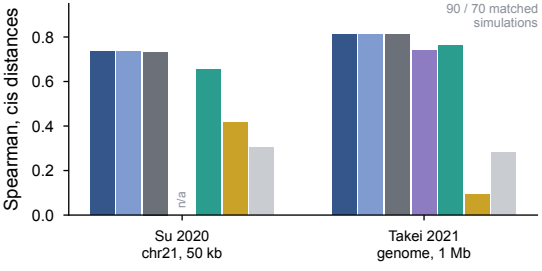

one benchmark for every method

e **Held-out contacts**
8 cells × 3 folds; matched-separation negatives

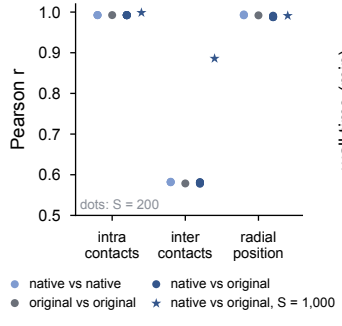

f **Imaging truth (simulated Hi-C)**
median model vs imaged distances

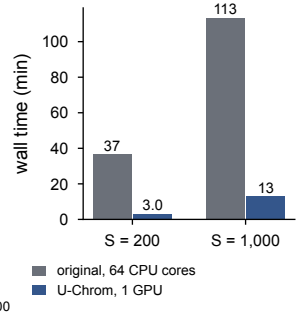

population reconstruction

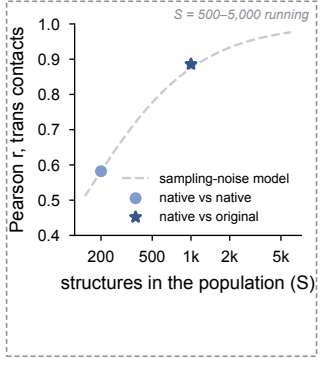

g **IGM: native vs original**
WTC11 2 Mb; population agreement

h **IGM speed**
same input and schedule

i **How many structures?**
seed-to-seed agreement, trans

j **Consensus structure (new)**
IMR90 genome vs Su 2020 imaging
