single-cell reconstruction: EMber vs existing methods, one benchmark

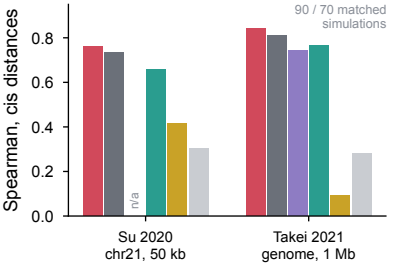

a **Time for one model**
Cell 1; CPU: EPYC 9754, GPU: H100

b **Held-out contacts**
8 cells × 3 folds; matched-separation negatives

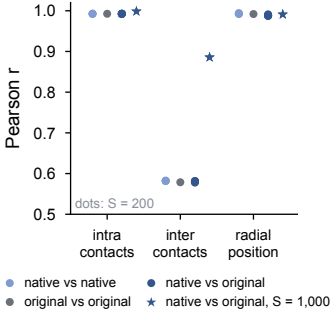

c **Imaging truth (simulated Hi-C)**
median model vs imaged distances

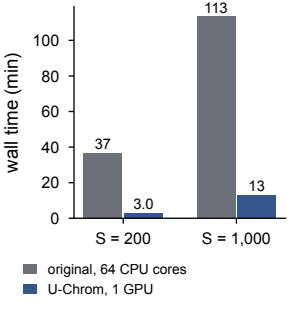

population reconstruction (IGM)

d **IGM: native vs original**
WTC11 2 Mb; population agreement

e **IGM speed**
same input and schedule

f **How many structures?**
WTC11 2 Mb, 3 seeds; grey: minutes on 1 GPU
