single-cell reconstruction

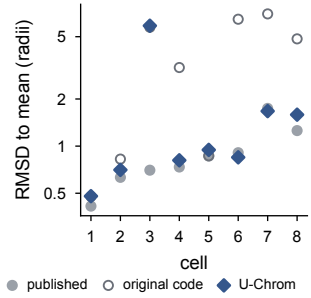

a **U-Chrom reconstruction**
Stevens 2017 Cell 1, 100 kb

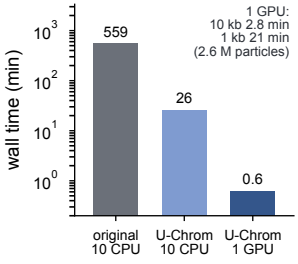

b **Agreement with published**
Cell 1, pairwise distances

c **Ensemble precision**
8 cells × 10 models

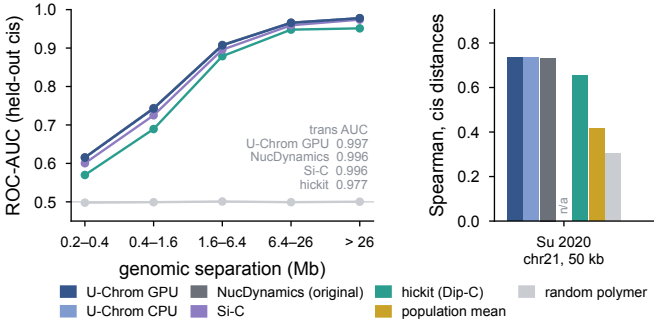

d **NucDynamics speed**
Cell 1, 10 models

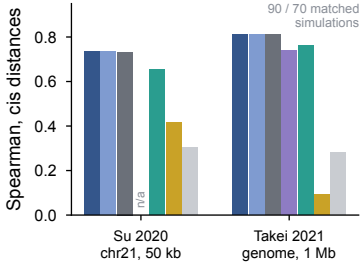

one benchmark for every method

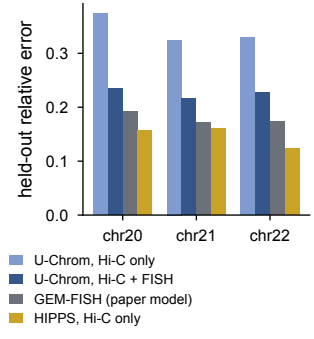

e **Held-out contacts**
8 cells × 3 folds; matched-separation negatives

f **Imaging truth (simulated Hi-C)**
median model vs imaged distances

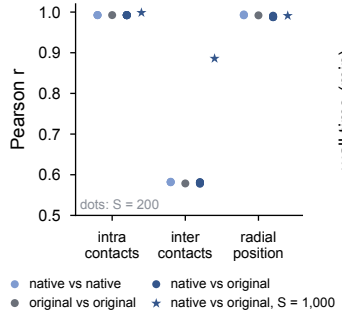

g **Hi-C + FISH (GEM-FISH)**
Wang 2016; 10 % of cells held out

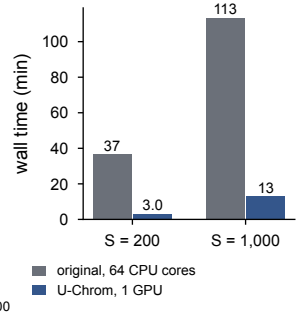

population reconstruction

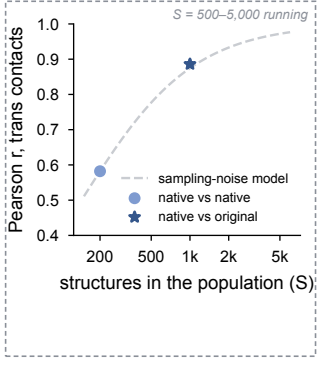

h **IGM: native vs original**
WTC11 2 Mb; population agreement

i **IGM speed**
same input and schedule

j **How many structures?**
seed-to-seed agreement, trans

k **Consensus structure (new)**
IMR90 genome vs Su 2020 imaging
