simulated diploid scHi-C from imaged cells

pre-registered test set (held-back units), frozen configuration

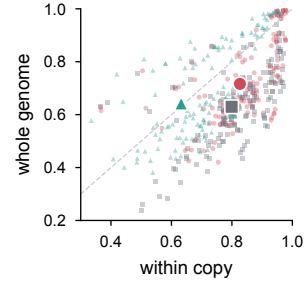

a **Per-copy structure**

144 tables, truth cells 3-5

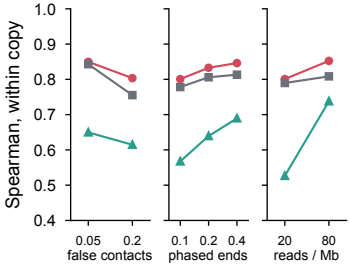

b **Within copy vs genome**

dots: tables; large: mean

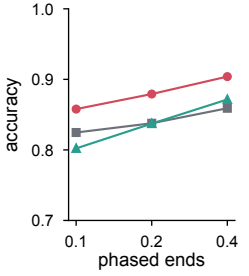

c **Robustness**

within copy, mean over tables

d **Phase accuracy**

unphased signal ends

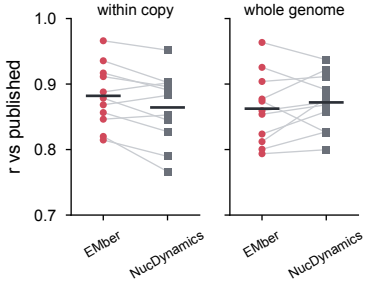

EMber (U-Chrom) NucDynamics hickit (Dip-C)

Dip-C GM12878 (Tan 2018), 11 held-back cells, 100 kb, 10 models

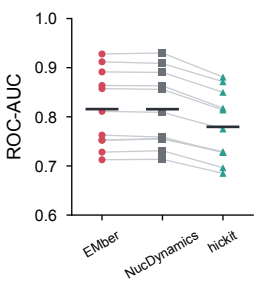

e **Agreement with published**

distance-matrix r vs Dip-C

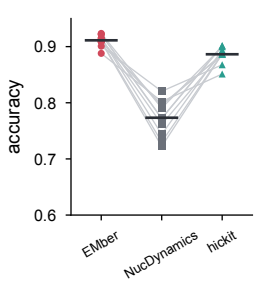

f **Held-out contacts**

both ends phased; cis

g **Phase of masked ends**

known phases hidden, then inferred

h **Wall time**

structure: median of 11 cells; phase: c
