Format versions and the flat Parquet reference

Backed access by layout

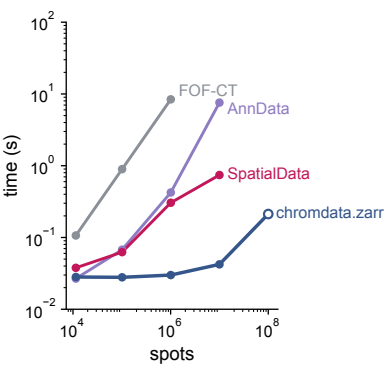

e Round trips

what survives export → import

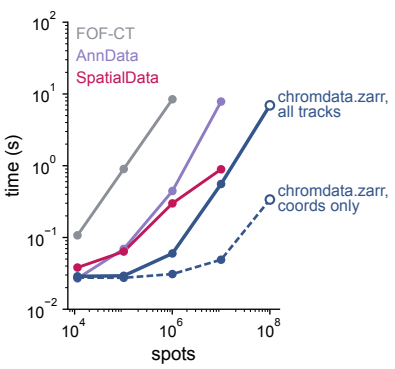

f One trace, across formats

open or load the file, then get one trace

g One chromosome, across formats

open or load the file, then get one chromosome

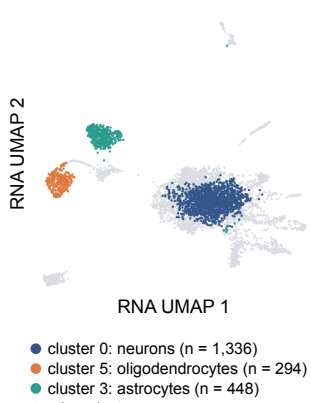

Groups from one modality, structure from another

scHiCAR mouse primary motor cortex (5,313 cells): RNA clusters → pseudo-bulk Hi-C from the linked per-cell .scool

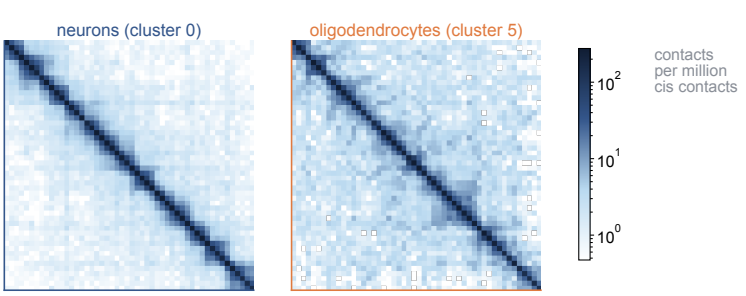

h RNA clusters

16 Leiden clusters on the RNA PCA

i Pseudo-bulk contact maps

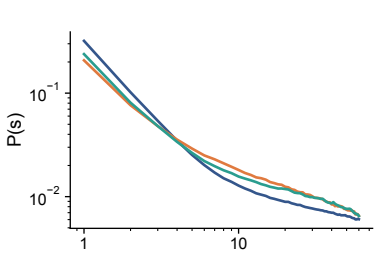

chr2:40–90 Mb, 1 Mb bins, pseudo-bulk of each cluster

Pseudo-bulk from the per-cell .scool equals the published per-type .cool for 22/22 cell types (max |Δ| = 0 over 4.2 M pixels, all chromosomes)

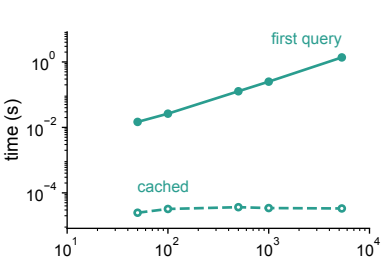

j Contact probability vs distance

all chromosomes, per group

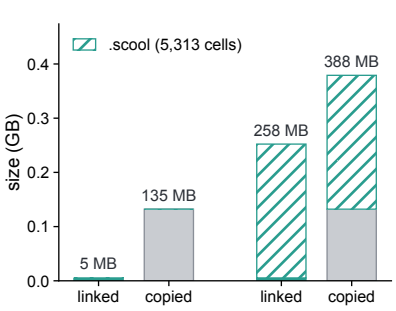

k Pseudo-bulk query time

chr1, summed from the linked .scool

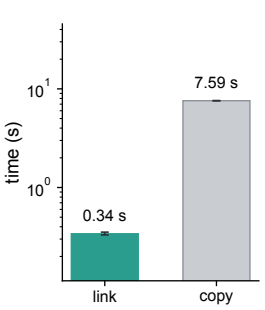

Linked vs copied contacts

l On-disk size

m Import time

n Query per cell type
